1. Add button: it is used for adding employee information. [note: every field must be filled up otherwise the program will not allow you to store it in the database]
2. Delete button: it is used for deleting employee information. You just need to write the id of an existing employee id in ID field
3. Update button: it is used for updating employee information.
4. Clear button: it is used for clean all the fields.
5. Report button: it is used for making a report of individual employee information. You just need to click on the employee information from Table and click on the Report Button.
6. Employee Table: it will show the entire existing employee in your work place.
